

Enabling procurement data value chains for economic development, demand management, competitive markets and vendor intelligence

ABOUT THE PROJECT

The project will explore how procurement knowledge graphs, paired with data management, analytics and interaction design could be used to reform four key procurement areas: economic development, demand management, competitive markets and supplier intelligence.

PROJECT GOALS

We will develop an integrated technology platform, with data, core services, and online tools, to be validated in 3 business cases in public/corporate procurement in Slovenia, Spain and Italy. The expected impact is substantial, with €200m savings in EU public spending; 25% increase in the value unlocked by enhanced procurement management in the private sector; and 20% more SMEs bidding for contracts.

PARTNERS:

- SINTEF (NO)
- Ayuntamiento Zaragoza (ES)
- Cerved Group SPA (IT)
- Chrion LTD – Open Corporates (UK)
- Ministry of Public Administration (SI)
